1. Cab Fare Calculation

C Program

```c
#include <stdio.h>

int main() {
    float distance, fare = 100;
    int member;

    scanf("%f %d", &distance, &member);

    if (distance > 10)
        fare += (distance - 10) * 20;

    if (member == 1)
        fare *= 0.90;

    printf("Final Fare: Rs.%.0f\n", fare);
    return 0;
}
```

Note: Input distance in km, then member as 1 for true or 0 for false.
