3. Treasure Hunt

C Program

```
#include <stdio.h>

int main() {
    int coins, x, y;
    int ben, blackbeard, remaining, each;

    scanf("%d %d %d", &coins, &x, &y);

    ben = coins * x / 100;
    remaining = coins - ben;
    blackbeard = remaining * y / 100;
    remaining -= blackbeard;
    each = remaining / 3;

    printf("%d\n%d\n%d\n", ben, blackbeard, each);
    return 0;
}
```

Note: Enter total coins, Long Ben's percentage, then Blackbeard's percentage of the remainder. Integer division discards fractions, matching the sample.
