# 6. Car Race

## C Program

```
#include <stdio.h>

int main() {
    int a, b, c, cars;
    scanf("%d %d %d %d", &a, &b, &c, &cars);

    if (cars != 0 && a % cars == 0)
        printf("Car 1 goes into road A");
    else if (cars != 0 && b % cars == 0)
        printf("Car 1 goes into road B");
    else if (cars != 0 && c % cars == 0)
        printf("Car 1 goes into road C");
    else
        printf("No path exists");

    return 0;
}
```

**Note:** This follows the sample's apparent rule: choose the first road number divisible by the number of cars. The problem statement does not fully explain the road-selection rule.
